Pure-Flo to Close Danvers Manufacturing Facility

Danvers, MA – February 6, 2006 – ITT Industries announced today that it will close its Pure-Flo manufacturing facility in Danvers, MA by April 15, 2006. The facility currently manufactures systems for the biopharmaceutical market; it employs 42 people. As part of its decision, the company will transfer the existing business to Pure-Flo in Kenosha, WI (262 654-6466).

ITT made the strategic decision to evaluate manufacturing capacity in Pure-Flo Danvers site beginning in June 2005 in response to overall economic weakness in the global biopharmaceutical marketplace. Other factors leading to this decision include increasing segment competition, excess capacity and general business consolidation.

“This decision is not a reflection of the efforts and commitment of the employees here at the organization,” said Chuck Graves, Director of Sales &

Marketing for the Pure-Flo Solutions Group. “Like those at our other Pure-Flo facilities, the employees here have continually delivered the highest quality products to our customers. Unfortunately, continued economic softness and excess capacity have made necessary our strategic decision to close this facility.”

Graves continued, “ITT is committed to fulfilling its commitment of its customers. We will complete open orders and transition our business before releasing the workforce. The company is also committed to assisting our employees during this transition period. We are providing outplacement and training services to aid employees in their employment search.”

ITT Pure-Flo manufactures hygienic process components and systems for pharmaceutical manufacturing, bioprocessing, cosmetics, food and beverage and other hygienic operations.
