ITT INTRODUCES SERVICE AND PARTS PROGRAM

Keeping process valves in good operating condition critical in the regulated world of drug manufacturing.

March 10, 2009: ITT is pleased to announce the market release of the Pure-Flo Authentic Service Parts and Actuator Refurbishment programs. These programs are the first elements of a comprehensive Parts and Service program for the Pure-Flo product line.

Keeping process valves in good operating condition is critical in the regulated world of drug manufacturing. A poorly maintained valve puts high value product at risk. However, a small investment in preventative maintenance will pay many returns in uptime and trouble free operation.

The Service Parts program highlights ITT's commitment to support customers with quality authentic replacement parts necessary for proper valve maintenance. Diaphragms, critical spare topworks, gall resistant fasteners, and autoclave rebuild kits are fundamental components of the service parts program. All ITT service parts meet our strict quality standards. Authentic ITT service parts are identical to those used in our valve production, giving customers peace of mind that the part they receive will be equal to the part they are replacing.

The Authentic ITT Service Parts brochure (PFSP-08) provides critical information on replacement parts including topwork illustrations and part identification. This brochure will be a valuable resource for maintaining Pure-Flo products.

The Actuator Refurbishment and Retrofit program is another key component of the Pure-Flo service program. The program provides customers with the option of investing in refurbishment of existing equipment. Factory refurbishment services provide a means for customers to extend service life and assures proper operation of critical process equipment.

Our factory-trained specialists use an extensive process to review and inspect every ITT Pure-Flo actuator accepted into our program, ensuring that damaged or worn components are replaced with new factory parts. A cost effective alternative to the replacement of actuators, refurbishment will provide customers with a remanufactured actuator to original factory specifications at a reduced cost in comparison to a new actuator.

To learn more, visit the Pure-Flo website at www.ittpureflo.com and click “Valves” and then click “Service and Parts”.

Pure-Flo® is a registered brand of ITT Corporation.
